## Power Quality Risk Report

Facility: Adyaan

Mode: Trend Risk Mode (Log Cadence)Generated: 2026-01-13 18:30

25

/100

Safe

### Executive verdict

No immediate power-quality risk detected. Observed load behavior is consistent with stable operation.

### Key observations

- No critical risk indicators identified.

### Why you're seeing this result

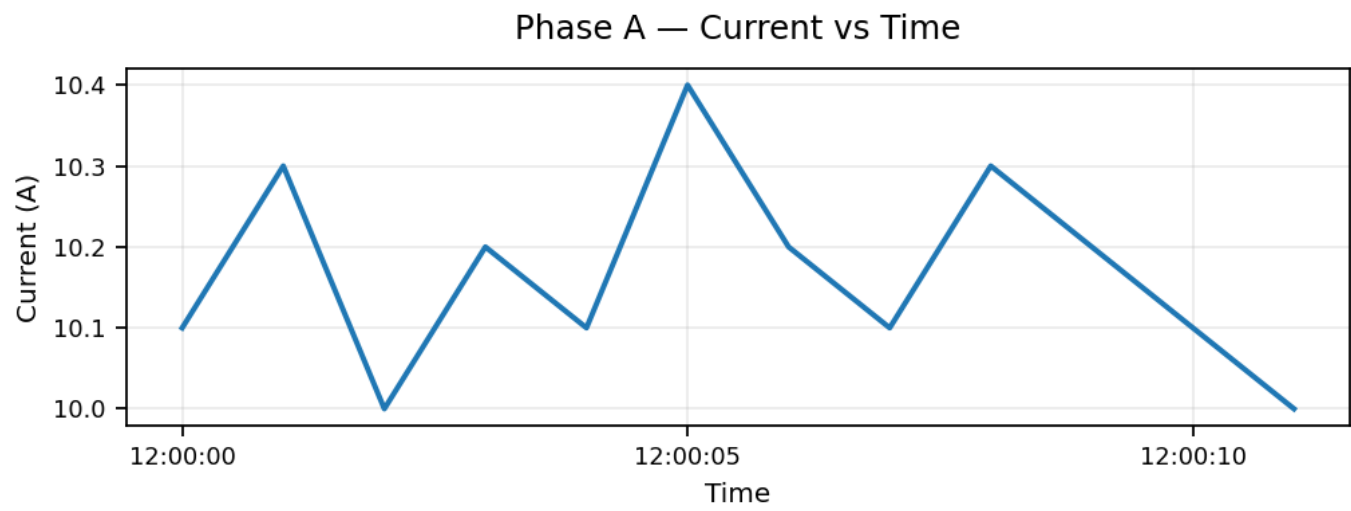

- Observed current behavior reflects non-linear electrical loading patterns.
- Phase-level variability suggests uneven load distribution across monitored circuits.

### Recommended next steps

- No urgent mitigation required based on trend indicators; continue periodic monitoring.

# Detailed Technical Findings

- Facility risk score: 25/100 (Safe)
- Estimated sampling rate: ~1.00 Hz
- Analysis mode: Trend Risk Mode (Log Cadence)
- Phase A: Risk 25/100 (Safe) | Crest 1.02 | Variability 1.2%
