### Monitor

Baseline: 25/100 Δ +35

Overall risk increased from

#### Executive verdict

Early warning indicators detected. Continued monitoring is recommended to prevent escalation during peak demand or future expansion.

#### Key observations

- Phase A: High variability → harmonic risk signature

#### Why you're seeing this result

- Observed current behavior reflects non-linear electrical loading patterns.
- Phase-level variability suggests uneven load distribution across monitored circuits.

#### Recommended next steps

- Priority: Current variability indicates pulsed load behavior; schedule a power quality capture (true waveform) during peak load.
